Project title	**Flower Shop Management System**
Author(s)	**Șchiopu Denisa-Patricia**
Group	**30241**

1. Task Description

Overview

The application is a Java-based Flower Shop Management System. It includes 10 forms. The user interacts with the application through a graphical user interface (GUI) that allows them to perform actions in the forms.

SignUp

When the application starts, it opens the SignUp window.
It allows new users to create an account by providing their personal information, including their name, email, phone number, address, and password.

Login

When the "Login" button is pressed on the Signup window, a Login window is opened. It allows users to log into their accounts and use the application.

Home

After logging in, the Home window is opened. Different actions are available depending on whether the admin logged in or a regular user. For regular users only the "Logout" that logs out the user and returns to the Login page, "Place Order", "View Previous Orders", "Change Password" and "Exit" are available. The admin gets access to additional functions: "Manage Category", "New Product", "View/Edit & Delete Product" and "Verify Users".

Place Order

This form allows the logged in user to place orders.

View Previous Orders

Allows the logged in user to view their previous orders.

Change Password

Allows the logged in user to change their password.

Manage Category

Allows the administrator to add/delete categories.

New Product

Allows the administrator to add new products.

View/Edit & Delete Product

Allows the administrator to delete, modify and view products.

Verify Users

Allows the administrator to enable or disable user accounts.

2. Class Discovery

These are some CRC cards.

Main	
Superclasses	None
Subclasses	None
Actions	• Starting the application
Collaborators	• SignUpForm

SignUpForm	
Superclasses	None
Subclasses	None
Actions	• Register new user account • Redirect the user to Login page
Collaborators	• LoginForm

LoginForm	
Superclasses	None
Subclasses	None
Actions	• Log into account • Get to Home page once logged in • Redirect the user to Sign Up page
Collaborators	• SignUpForm • Home

Home	
Superclasses	None
Subclasses	None
Actions	• Allows the user to interact with the application • Allows basic actions for regular users: Place Order, View Previous Orders, Logout, Exit, Change Password • Allows additional actions for admin: Manage Category, New Product, View/Edit & Delete Product and Verify Users
Collaborators	• LoginForm • ChangePasswordForm • ManageCategoryForm • NewProductForm • PlaceOrderForm • VerifyUsersForm • ViewEditDeleteProductForm • ViewPreviousOrdersForm

ChangePasswordForm	
Superclasses	None
Subclasses	None
Actions	• Allows the user to change their password
Collaborators	• Home

ViewPreviousOrdersForm	
Superclasses	None
Subclasses	None
Actions	• Allows the user to view their previous orders
Collaborators	• Home

PlaceOrderForm	
Superclasses	None
Subclasses	None
Actions	• Allows the user to place an order
Collaborators	• Home

ManageCategoryForm	
Superclasses	ManagerForms
Subclasses	None
Actions	• Allows the admin to add or delete categories
Collaborators	• Home

ManagerForms	
Superclasses	None
Subclasses	• ManageCategoryForm • VerifyUsersForm • ViewEditDeleteProductForm • NewProductForm
Actions	• Abstract class for the admin accessible pages • Sets a basic format of the title and the close button • Handles the clear, close and validate fields methods
Collaborators	None

VerifyUsersForm	
Superclasses	ManagerForms
Subclasses	None
Actions	• Allows the admin to enable or disable user accounts
Collaborators	• Home

NewProductForm	
Superclasses	ManagerForms
Subclasses	None
Actions	• Allows the admin to add products
Collaborators	• Home

ViewEditDeleteProductForm	
Superclasses	ManagerForms
Subclasses	None
Actions	• Allows the admin to view, edit or delete products
Collaborators	• Home

3. Class Diagram
